

Why Level Access?

Find risk earlier, fix issues faster, and prove progress

Scale accessibility, no matter where you're starting, with Hybrid Intelligence: a unified platform, AI agents, and human expertise.

With this integrated approach, you'll be empowered to find accessibility issues more quickly, fix them more reliably, and prove program impact—while preventing new barriers from emerging.

Move from risk to ROI

Make accessibility a seamless part of your operations with the three pillars of sustainable programs: comprehensive auditing and testing to find the risks that matter, integrated remediation tools for efficient fixes, and ongoing governance to prove measurable results.

82%

372 issues fixed

Surface the risks that matter: **Audit & test**

Identify and prioritize the accessibility issues that have the greatest impact on your users and compliance status.

- **Monitoring:** Scan at scale to identify new or recurring issues across your portfolio. Get quick insight on what's changed since the last scan with AI summaries.
- **Automated Flows:** Go beyond automated scanning by testing complex user flows with approaches that reflect how people with disabilities actually interact with your product.
- **Browser Extension:** Give developers, testers, and accessibility leads instant access to the tools they need—right in their browser. The Level Access Browser Extension supports automated scans, flow testing, and streamlined manual audits across any environment.
- **Level CI:** Integrate accessibility testing into your continuous integration pipeline, so developers get instant, context-specific feedback in their pull requests, and new issues don't enter production.
- **Auto-Match Findings:** Automatically track accessibility issues across builds to prevent the same problems from resurfacing as new findings.
- **Manual Audits & Real User Testing:** Get actionable evaluations of your digital assets from Level Access experts, plus detailed feedback from users with disabilities through our partnership with Fable.

Address and prevent issues in the flow of work: **Build & fix**

Fix problems where design, development, and authoring work is happening. Stay organized and prevent gaps or regressions while maintaining momentum.

- **Ask Level AI:** Get fast answers to accessibility questions from an in-platform chatbot that delivers relevant, precise guidance—so your team can resolve issues quickly and keep projects on track.
- **Smart Findings:** Prioritize and act on the accessibility issues that matter most. Consolidate findings across all assets, eliminate duplicate issues, and filter and triage with AI for fast remediation.
- **Issue Tracking Integrations:** Sync accessibility findings automatically with Jira, Asana, or Azure DevOps to reduce duplication of effort and ensure every issue is resolved quickly.
- **Projects and Tasks:** Organize accessibility findings into actionable projects and tasks within the Level Access Platform. Assign ownership, track progress, and manage work efficiently.
- **Automated Remediation Technology (ART):** Automatically address many common accessibility issues on live websites. ART detects problems in real time, applies programmatic fixes, and lets teams customize changes without coding.
- **Webhooks:** Keep accessibility top of mind by integrating tasks into existing workflows. Trigger actions and sync platform data to external tools like Slack so teams receive assignments where they already work.

Show measurable, credible progress: **Governance & reporting**

Prove progress across programs, departments, and assets, align with recognized standards, and share how accessibility contributes to organizational goals.

- **Dashboards:** Review and report on accessibility metrics across your entire organization, and drill down for granular insight into risks and progress.
- **Reporting Agent:** Transform accessibility data into usable insights.
- **API:** Integrate accessibility data into your own business intelligence (BI) tooling.
- **Conformance Score and Conformance Report:** Align accessibility metrics with program goals and the Voluntary Product Accessibility Template (VPAT®) framework.
- **Digital Accessibility Maturity Model (DAMM):** Get an objective, expert assessment, including benchmarking, of your program's current state, along with recommended next steps.

Close the knowledge gap: **Training & support**

Develop skills, build confidence, and empower your teams to drive accessibility success across your organization.

- ✔ **Academy & Training:** Build internal expertise with live and on-demand, role-specific training that empowers all teams to support your organization-wide goals.
- ✔ **Live Consultations:** Confidently navigate challenges and sustain compliance through ongoing support from accessibility experts.

Recognized by Forrester

Level Access is a Leader in The Forrester Wave™: Digital Accessibility Platforms, Q4 2025 report, receiving the highest score in the Current Offering category and the highest possible score in the Innovation criterion.

Take the next step to scalable, sustainable accessibility
